

Recent Projects

Personal & Independent Projects

Personal Project & Technical Sandbox

URL: <https://timana.net>

Role: Lead Engineer & Architect

Overview: Designed and built a lightweight, high-performance static site using React, Astro, and Tailwind CSS. Modern architecture with zero database overhead, containerized and deployed via Docker infrastructure.

Nagata Racing (Motorsports Team Website)

URL: <https://nagataracing.com>

Role: Product Owner, Designer, Full-Stack Developer & SysAdmin

Overview: End-to-end creation of a custom web platform for a regional racing team. Handled the complete product lifecycle including UI/UX design, custom theme and backend development, server deployment, and ongoing maintenance.

Plan Left (Agency Client Projects)

Role: Senior Web Developer & Systems Engineer

Overview: Managed full-lifecycle development, performance optimization, custom API integrations, and server infrastructure across dozens of agency client web properties.

Projects Built from Scratch (Full-Lifecycle Development & Custom Architecture):

Handled complete engineering from Figma designs to production launch. Built custom WordPress and Drupal themes/plugins, configured server infrastructure, and optimized for Core Web Vitals.
