WORK EXPERIENCE

● Senior Full Stack & Systems Engineer (Contract / Part-Time)

Jun 2025 – Present

Codexa · Lima, Peru

- Architected and deployed scalable web applications, and high-performance CMS platforms using modern PHP (Laravel, WordPress, Drupal), React, and custom REST API endpoints, enforcing strict WCAG 2.1 accessibility standards.
- Engineered a proprietary custom theme and plugin framework for WordPress Multisite deployments, enabling rapid application launches via pre-built configurable blocks that reduced delivery time by 65% and increased agency sales capacity by 50%.
- Integrated autonomous AI agent workflows (Claude Code, Gemini, Hermes Agent) and custom terminal automation scripts into daily engineering routines, accelerating code auditing, test generation, and complex feature delivery cycles.
- Provisioned, hardened, and maintained Linux production servers across Debian, Ubuntu and RHEL, performing PHP/MySQL performance tuning, Nginx caching configuration, and automated database backup management.
- Implemented robust infrastructure security and site reliability practices, building automated deployment pipelines (GitHub Actions/Bitbucket Pipelines) and staging-to-production workflows with S3 storage integration.
- Partnered with project managers, UI/UX designers, and QA engineers in an Agile environment to translate complex technical requirements into maintainable, production-ready code while meeting

tight client deadlines.

Senior Web Developer (Full-Time)

Oct 2014 – Jul 2026

Plan Left · Tennessee, USA (Remote)

- Led full-lifecycle web engineering across 60+ enterprise client platforms using PHP (WordPress, Drupal, Laravel), translating Figma designs into responsive, highly accessible applications adhering to strict WCAG 2.1 standards.
- Engineered custom PHP plugins, middleware, and REST API integrations to automate data workflows, including real estate inventory syndication feeds, custom Mautic marketing pipelines, and GoHighLevel CRM integrations.
- Architected custom Laravel Forge and DigitalOcean provisioning scripts via REST APIs to automate standardized server setups, reducing deployment cycles by over 90% (from hours down to 10 minutes).
- Built internal CLI/automation tooling to streamline staging environment setups across WordPress and Mautic, slashing initial project onboarding time by 80% and eliminating human configuration error.
- Managed multi-cloud hosting infrastructure spanning 85+ production server environments (Laravel Forge, WP Engine, WordPress VIP) using Bitbucket Pipelines for CI/CD, maintaining automated S3 backup routines, DNS routing, and 99.99% system uptime.
- Optimized web application performance and database queries for Core Web Vitals, configuring server-side object caching (Redis/Memcached) to boost PageSpeed Insights performance scores by 35%–45% and cutting initial load times by up to 50%.
- Mentored 3 junior full-stack developers, conducted daily code reviews (PHPStan, PSR-12, phpcs), and collaborated with cross-functional product teams, project managers, and UI/UX designers in an Agile/Scrum setting.

Full Stack Developer (Contract / Agency)

Mar 2021 – May 2025

BettyBets · Buenos Aires, Argentina (Remote)

- Maintained and expanded core features within an active production Laravel application for an event-based betting platform, writing clean object-oriented PHP code, managing database migrations, and resolving complex backend application bugs.
- Refactored front-end asset pipelines, JavaScript bundles, and stylesheets, reducing initial page load times by 30%+ and significantly improving cross-device mobile responsiveness.
- Owned end-to-end server administration and hosting environments for both the core Laravel application and high-traffic marketing platforms, executing software patches, monitoring uptime, and managing automated database backup routines.
- Led the full-lifecycle development and deployment of public marketing websites and campaign landing pages built on WordPress and Drupal.

Web Dev & SysAdmin

2011 – 2017

DRLP.net · Lima, Peru

- Architected and executed a full platform rebuild, migrating a high-traffic gaming portal (100k+ monthly active users) from Drupal to a custom, high-performance Phalcon PHP MVC architecture to eliminate server bottlenecks.
- Reduced server hosting infrastructure costs by 70% and significantly decreased page load times by optimizing database queries, server-level caching, and lightweight framework asset delivery.

Junior Web Dev

2014 – 2014

SoftBrilliance · Lima, Peru

- Developed custom WordPress themes from scratch using HTML5, CSS3, JS, and PHP.

- Junior SysAdmin & Dev

2012 – 2014
- iMailUnlimited · California, USA (Remote)

- Built custom Codelgniter server provisioning tools and enterprise SMTP/PowerMTA pipelines.
- Web Dev & SysAdmin

2006 – 2012
- Digital Networks del Perú · Lima, Peru

- Built client CMS platforms (Drupal, Joomla) and managed Linux hosting infrastructure.

◆ EDUCATION

- Bachelor of Science · Computer Engineering Technology

2019 – 2024

Universidad ESAN
- Associate of Science · Computer Engineering Technology

2007 – 2011

ISIL

◆ LANGUAGES

Spanish English

◆ PROFESSIONAL CERTIFICATIONS

- Professional Web Designer: Web/Multimedia Management And Webmaster

National University of Engineering
- Linux Expert: Computer Technology/Computer Systems Technology

National University of Engineering
- Google Cloud Computing Foundations

Google & ISIL
